

product applications

CDB type 1

how it works

Unswitched 1 channel CDB with 10 outputs. Switching is provided externally – power is switched prior to connection to the unit.

scenario

This scenario shows a CDB Type 1 being used to power all the luminaires in the room via extender cables, fixed 't' pieces attached to the luminaires and by drop Leads. Switching is provided externally.

| Type 1 CDB (one channel single area) | | | | |
|---|-------------------------|-------|----------------------|----------------------|
| Functionality/Switching Philosophy | Switching Arrangement | | | |
| | SW | PIR 1 | PIR 1 Sensor Setting | PIR 2 Sensor Setting |
| 1x10 | CDB switched externally | | | |
| Unswitched 1 channel CDB with 10 outputs. Switching is provided externally. | | | | |
